what is a html and a raw html

HTML (HyperText Markup Language) is the standard markup language used to structure and display content on web pages. Raw HTML refers to the unprocessed, plain-text HTML source code itself before a web browser or framework renders it, or unencoded HTML strings injected directly into a page. MDN Web Docs +3

What is HTML?

HTML acts as the skeleton of every website. It tells web browsers how to organize text, images, and links using tags enclosed in angle brackets. Wikipedia +2

- **Structure and Elements.** HTML uses pairs of opening and closing tags, such as `<p>` and `</p>`, to define paragraphs, headings, and lists. OVHcloud +1
- **Role on the Web.** According to MDN Web Docs, HTML defines the meaning and structure of web content. It works alongside CSS for visual styling and JavaScript for interactive behavior. YouTube · VirtualAddicti... +1
- **Rendered Output.** When you visit a website, your browser reads the HTML file behind the scenes and turns those tags into the formatted visual page you see on screen. YouTube · How to Beco... +1
